Overhead Burr & Trash Storage Units

- **Proven 'Triangle Manufacturing' Design**
- **Economical & Convenient**
- **Ease of Operation, 'Pull to Open - Pull to Close'**
- **Built to Last / Available from 10' to 60' Long**

Lubbock Electric Company is pleased to again offer for sale new overhead burr storage houses. These units are built to the exact specifications of the old "TRIANGLE" burr house, which was the industry standard for many years. The once-patented, 'one pull' hopper door system enhances ease of operation. These hoppers can be purchased in any 10' length up to 60'.

The hopper is 10' wide with vertical sidewalls and is highly resistant to bridging. When opened, the angled door design creates a 'funnel action,' which fills trucks with no side spillage. The angle of the top has been designed to allow maximum filling from the overhead screw conveyor. The flat sides and bolt-together design make for a tighter container. The structural columns are made of 6" beam to withstand the harshest wind and weather.

IF YOU HAVE BEEN LOOKING FOR THE SOLUTION TO GIN TRASH STORAGE AND HANDLING PROBLEMS, YOUR SEARCH IS OVER!

*New 50' Burr House at

Maximize Your Seed Storage Capabilities!

Let Lubbock Electric Company build a flat cotton seed storage building especially designed for your operation.

Lubbock Electric Company contracted this seed house at Hereford Farmers Gin, Texas; which measures 80' x 200' x 40' high at the peak. The capacity is over 4000 tons of fuzzy seed. The building is constructed of 14" - 22lb. beams on 20' centers. The beams are connected by 8" - 14 gauge 'C' purlings and the skin is 26 gauge 'R' panel sheets. The inside walls have a 4' steel panel along both sides to facilitate clean-out. These buildings can be fabricated to any length in increments of 20'.

*Don't forget---we buy, sell,
repair, add-on, and erect used
burr & seed houses!*
