*Lubbock Electric Co.*

**800-692-4474**

- **High Capacity Oil Filtering**
- **Efficient Hot Oil Cooling**
- **No More Lint Build-up Problems**
- **Easy Servicing**

*Stop hydraulic oil problems before they stop your gin. Lubbock Electric Company has the perfect combination to clean and cool your oil as needed. The pump runs whenever the press is in operation to continuously filter and / or cool your hydraulic oil.*

#### **Bare Tube Convection Cooler**

*Over 20,000 square inches of schedule 40, welded black pipe act as a huge heat sink to cool hot oil from press pump reservoirs. Even without the optional fan forcing air over the cooler, BTU losses per minute rival finned tube heat exchangers. The smooth, open clearances will not trap fine lint as the fins on conventional fin and tube coolers do.*

#### **High Capacity Filter System**

*The three phase pump circulates oil from one end of the reservoir(s) through the filter to the other end of the tank or tanks during operation of the press pumps. Bypass valves facilitate changing filters without shutting down the system. The filter element is easily removable for cleaning and it can be remotely mounted from the cooler. A handy indicator on the side of each filter indicates when the filter needs cleaning. Replacement filter elements are kept in stock at Lubbock Electric Co.*

#### **LECO Oil Cooler**

**OPTIONAL FAN AVAILABLE**

#### **LECO Oil Filter**

#### **Purchase Each Separately**

*If you only need cooling or filtration by itself, buy only what you need now. Should you ever want to add the other, the piping and layout has been designed for installation in stages. See other side for available configurations.*

### Cooler / Filter Configurations Available

1. 7 x 7 LEC Convection Cooler, less pump.
2. LEC Hi-Capacity Filter System complete with bypass valving, TEFC pump, and easy-change filter element.
3. LEC Complete Cooler / Filter System with 7 x 7 Cooler, TEFC pump, and easy change elements.
