Now Available: Dust Cover Kit for LEC-100 Seed Scale!

You've been asking for it --- and now it's available. We all realize that cottonseed is the worst offender when it comes to airborne lint and fine flyings in the gin. The constant action of the LEC-100 air cylinders only makes it worse.

Well, now we are offering a solution in the form of a kit to enclose the major openings of the scale, while containing access doors for maintenance and plexiglas windows to allow constant inspection of the working parts. A transition on the top facilitates connection to existing airlines to pull a suction on the scale.

The kit includes:

- (2) door units w/view windows
- (4) top closing plates
- (1) transition to 6" round pipe
- (1) lot - fasteners

Total Price - \$995.
